

Dual Inlet Adaptor for AdBlue®/DEF

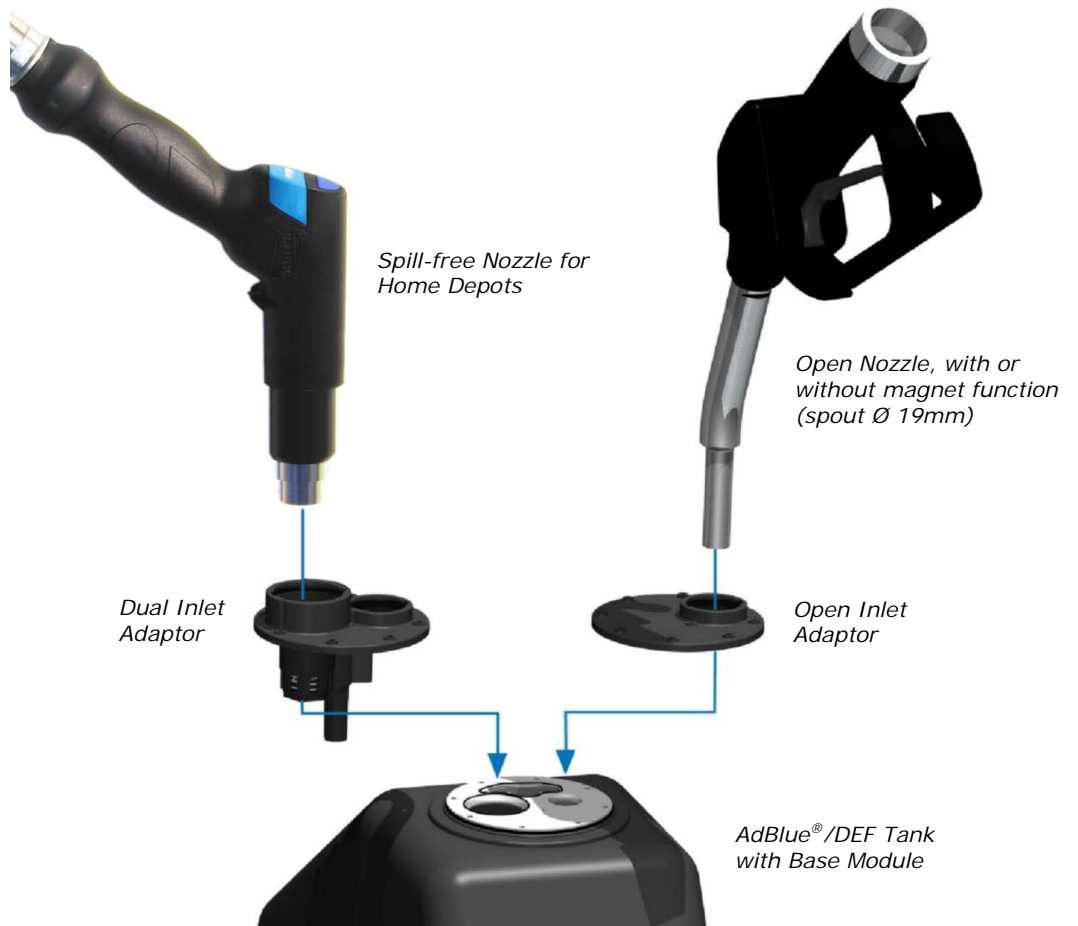

Features

- Dual inlet adaptor for both spill-free and open refilling
- Refilling interface according to ISO standard 22241-4
- Unique spill-free interface ensures that only AdBlue®/DEF can be filled
- Made of AdBlue®/DEF compatible materials

Flexible Solution for both Spill-free and Open Refilling

Identic has developed a spill-free system which allows vehicles to be quickly and safely refilled with AdBlue®/DEF. The new dual inlet adaptor has been developed to enable AdBlue®/DEF refilling with both a spill-free nozzle and an open nozzle. It contains an open inlet with a magnet ring to allow filling with a standard AdBlue®/DEF nozzle, and a spill-free inlet to enable filling with spill-free nozzles.

Innovative Refilling Solutions

Dual Inlet Adaptor Modules

The Identic dual inlet adaptor is based on a modular concept which allows for simple installation and replacement/exchange of adaptor versions. The dual inlet adaptor concept consists of:

Base Module

Mounted directly in the vehicle tank opening the base module contains inlets for both spill-free and open refilling. The open refilling inlet includes a magnet ring as described in the ISO standard 22241-4.

The base module can then be equipped with an open inlet adaptor or a dual inlet adaptor.

Open Inlet Adaptor

The open inlet adaptor allows for refilling with an open nozzle.

This inlet adaptor can easily be replaced with the dual inlet adaptor which allows vehicles to be quickly and safely refilled with AdBlue®/DEF.

Dual Inlet Adaptor

The dual inlet adaptor contains a sealed inlet for spill-free refilling and an open inlet for emergency refilling with an open nozzle.

The sealed inlet includes a spill-free coupling, level sensor and control unit.

Installation of base module and open inlet adaptor

Replacement of open inlet adaptor with dual inlet adaptor

Dual inlet for both spill-free and open refilling
