

Spill-Free & Ventilating Refuelling Kit

Vehicle Equipment Kit for Spill-Free Refuelling

Identic's AT-1 Spill-free Vehicle Refuelling (SVR) system has traditionally involved installation of the spill-free coupling inside the tank inlet pipe. The spill-free & ventilating refuelling kit has been developed for installation outside the tank inlet pipe. This enables much more flexibility in placing the spill-free coupling at a suitable place on the vehicle.

The spill-free and ventilating refuelling kit has a built-in tank ventilating feature which is activated when the nozzle is connected to the vehicle. Once the spill-free nozzle is disconnected from the vehicle the spill-free coupling forms a completely sealed interface to the tank.

The coupling kit forms a sealed interface when the nozzle is disconnected

The built-in ventilation is activated when the nozzle is connected to the vehicle coupling

The spill-free and ventilating refuelling kit simplifies the refuelling procedure since it is no longer necessary to open the tank inlet lid to access the spill-free coupling. The system is available for different fuels such as diesel, ethanol and RME.

Equipment Options for Different Vehicle Types

The spill-free refuelling kit can be mounted on many different vehicle types, ranging from buses to trucks and off-road vehicles. See installation examples below.

Example of a bus installation with the spill-free coupling kit mounted next to an existing tank inlet

Example of a spill-free coupling kit installed next to an existing tank inlet

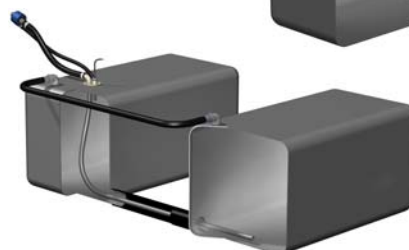

Installation box for trucks and off-road vehicles

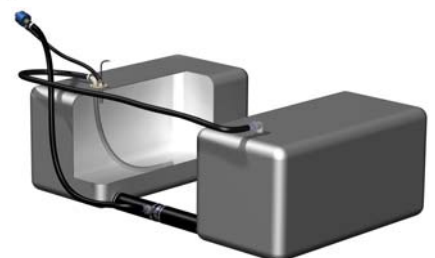

Equipment Options for Different Tank Configurations

The new spill-free vehicle equipment is available for many different tank configurations. See examples below. Please contact Identic for more detailed information.

Single tank

Double tank

Double tank with T pipe
